EDUCATION

University of New South Wales <i>Masters of Information Technology</i>	<i>Sep 2023 – Dec 2024</i>
University of Adelaide <i>Bachelor of Computer Science, GPA: 6.435/7</i> Awards: University of Adelaide Global Citizens Scholarship, 2022 Golden Key International Honour Society member	<i>2020 – 2023</i>

INDUSTRY EXPERIENCE

Forward Deployed Engineer – Lyra Technologies <i>Python, Typescript, Excel</i>	<i>Feb 2025 - Present</i>
- Optimized Excel data extraction and upload in Python by applying caching, efficient data structures, parallel async processing, and data compression—reducing processing time by 50% on average (up to 80% for large files) - Reverse-engineered Excel's undocumented XML structure to implement robust extraction and reconstruction of embedded PDFs and pivot tables, improving data completeness for AI processing - Built a Python test suite to validate excel data extraction and reconstruction across 275 Excel files, identified and resolved failures in 30+ files, and ensured 100% upload success, improving reliability and scalability	
Research Intern – Australian Institute of Machine Learning <i>Python, Stanza, GPT</i>	<i>Mar 2023 – Jul 2023</i>
- Researched into Vision and Language Reasoning field to enhance a robot's ability to understand written instructions - Constructed Python program to decompose complex action instructions into distinct components (e.g. verb, orientation, destination) utilizing NLP package Stanza and GPT, achieving 95% decomposition accuracy	
Software Developer Intern – Equinix Business Solutions <i>Go, PostgreSQL, Linux, R</i>	<i>Dec 2022 – Feb 2023</i>
- Collaborated with 3 senior engineers in optimizing a client's PostgreSQL database topology by creating a comprehensive technical report detailing 9 optimization strategies, achieving timeliness of a tightly scheduled 1-month project - Executed thorough testing of a Go Local Area Network (LAN) device synchronization program, resolving 3 critical file transfer and master-slave synchronization bugs, ensuring smooth production roll-out	

EXTRA-CURRICULARS

Project Director - UNSW Software Development Society	<i>Dec 2023 – Dec 2024</i>
- Led a team of 7 to develop an open-source UNSW course review website, attracting 10,000+ monthly views, utilizing Typescript, React (Next) frontend, Express with PostgreSQL backend, Prisma ORM, Redis, and Docker - Deployed over 4 major features, including dark mode, course filter button, review scraping, and SEO optimizations - Organized project delivery by initiating structured weekly meetings, creating detailed plans, and maintaining codebase documentation and tickets, leveraging Confluence and GitHub Projects	
International Collegiate Programming Contest (ICPC) South Pacific Divisional Finals Level B	<i>Sept 2022</i>
Placed 1st in South Australia, 10th / 50 Teams across the APAC region (C++, Competitive Programming)	

PROJECTS

Business Process for SMEs utilizing E-Invoice APIs	<i>Jun 2024 – Aug 2024</i>
Designed and built APIs for SMEs to convert PDF and JSON invoices to UBL XML format, validate schemas and content against predefined rules, and send invoices via email using Google Client API (Python, Flask, XML)	

PROGRAMMING LANGUAGES & TECHNOLOGIES

Proficient: Python, Typescript, C++

Experienced: Javascript, PostgreSQL, MongoDB, React, Go, C, R, Bash, Rust, Git, Linux, Next.js, Docker, AWS
